

Agentic AI for Hospitality

Next-Level AI Systems for Hotels, Restaurants and Service Businesses

Agentic AI is the next level in the practical evolution of AI: from isolated model outputs to systems that understand context, use tools, work with business data, follow workflows, ask for approval and produce traceable results.

Why this course

Haaga-Helia Online already has a strong hospitality and service-business portfolio: hospitality innovation, strategic revenue management, strategic pricing, distribution, guest experience, business intelligence, F&B management, law and leadership. The opportunity is to connect these business areas through practical AI agent workflows.

- Teach agentic AI as a hospitality operating capability, not as a generic tool topic.
- Frame every module around real venue workflows: guest, commercial, revenue, operations and back office.
- Give participants reusable agent blueprints and a pilot plan for their own property or service business.

Core promise: managers learn how to design controlled agents that support key hospitality functions while keeping human judgment, brand standards and data protection in control.

Market scan

Current market theme	How our course goes deeper
AI in hotel management and guest service	Agent workflows for guest messaging, feedback triage, escalation and service recovery
Front office, reservations and guest communication	Context-aware agents connected to policies, services, availability rules and staff approval
Revenue, pricing and distribution	Revenue decision-support agents: booking pace, demand signals, event calendars, channel mix and margin notes
Sales, marketing and personalization	Commercial agents for segment discovery, campaign planning, offers, group sales and loyalty workflows
Digital transformation and strategy	Implementation blueprint: data inventory, governance, ROI, pilot design and scaling path

Hospitality Agent Map

The course is structured around five practical domains where agents can support hospitality work.

1. Guest Experience Agents

- multilingual guest messaging
- review and feedback analysis
- complaint triage and service recovery
- pre-arrival and post-stay communication

2. Commercial Agents

- segment discovery from booking and CRM data
- campaign and offer planning
- corporate and group sales support
- competitor and market signal monitoring

3. Revenue and Distribution Agents

- demand signal monitoring
- pricing memo preparation
- channel mix and margin analysis
- occupancy, ADR, RevPAR and TRevPAR support

4. Operations and F&B Agents

- shift handover summaries
- SOP assistant for staff
- procurement and supplier communication
- menu engineering and food-waste notes

5. Back-Office and Governance Agents

- invoice and document processing
- contract and policy search
- management reporting
- audit trail, permissions and approval workflows

Recommended product

- 27-hour online course aligned with Haaga-Helia's compact intermediate course format.
- Self-study videos, templates, quizzes and practical assignments.
- Final output: hospitality agent opportunity map, one detailed agent blueprint, governance and ROI plan.

Course Route

Module	Focus	Participant deliverable
1. Agentic AI as the next level of AI	Models, context, tools, memory, workflows, approvals; hospitality value chain as agent design map	Hospitality agent opportunity map
2. Hospitality data, context and knowledge	PMS, POS, CRM, reviews, booking engines, menus, SOPs, emails, invoices; access and privacy boundaries	Data and context inventory
3. Guest Experience Agents	Guest journey, multilingual communication, feedback classification, service recovery, escalation rules	Guest experience agent blueprint
4. Commercial Agents	Marketing, sales, segmentation, campaign planning, group sales, review mining for positioning	Segment-to-campaign workflow
5. Revenue and Distribution Agents	Demand signals, booking pace, event calendars, pricing memos, channel mix and revenue manager approval flow	Revenue decision-support workflow
6. Operations, F&B and Back Office Agents	Shift handovers, SOP support, procurement, inventory, menu engineering, invoice extraction and reporting	Operations or back-office agent blueprint
7. Governance, ROI and implementation roadmap	Human approval gates, risk categories, value measurement, pilot design and scaling path	Final AI agent pilot plan

Demo lesson

From Guest Signals to Service Recovery Actions

- Import guest reviews, emails and internal notes.
- Classify issues by topic, severity and business impact.
- Draft response options in brand tone and escalate high-risk cases.
- Create weekly insights for operations, marketing and revenue.
- Review actions and update SOPs.

What to reuse from Nikolay's Agentic AI course

Use from Nikolay's course	Hospitality adaptation
Agents, tools, memory and dynamic context	Agent blueprints for guest, commercial, revenue, operations and back-office workflows
Workflow automation and integrations	Practical venue processes: handovers, approvals, supplier messages, service recovery
AI business process automation	Manager-facing pilot design with measurable time, quality and revenue outcomes
Voice and speech agents	Reservation calls, guest requests, internal reporting and staff support scenarios
Multimodal AI for documents, menus, images and OCR	Invoices, menus, policies, reviews, forms and operational records
Governance and human-in-the-loop	Brand standards, escalation rules, permissions, audit trail and ROI tracking

Why Nikolay Sekachev

- Lecturer of AI for Business Leaders in the eMBA programme at Stockholm School of Economics in Riga.
- 25 years in business and investments; MBA in finance; background in astrophysics and law.
- Corporate AI education work in Estonia and Latvia.
- Creator of practical programmes on LLMs, agents, workflow automation, voice, multimodal AI and business transformation.
- Focus: moving learners from AI usage to AI solution design.
